

Manufacturer of wireless solutions for audio, video and data transmission since 2003 on market.  
Distribution in Europe, Africa and America

# Product description

Products for:  
CCTV  
automatics  
professional television

## Black Link HD5

**If there is interference in the picture and / or you achieve a shorter distance check the following settings:**

- \* Change the channel number to another (do the test for at least 3-4 channels of manual work). *BlackLink uses free 5GHz band which is also used by other devices. Check if they are close to a large antenna from WiFi or other wireless communication devices and move the receiver away from them.*
- \* Check if there is full optical visibility between the antennas.
- \* Check the antennas and broadcasting - should be set according to the instructions. Receiving antennas should be at least 1.5 meters above the highest obstacle.
- \* Check the bandwidth frequency 5GHz WiFi in your area using eg. the program for cellphones: WiFi Analyzer (Pegi – Android)
- \* If the above changes were unsuccessful, contact your CAMSAT service at tel. +48 52 387 3658 26 or e-mail. Send us the photos fo the area to [serwis@camsat.com.pl](mailto:serwis@camsat.com.pl) – it can significantly help identify interference source.

**Yours respectfully  
CAMSAT technical team**
